## **DETAILED ACTION**

### ***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Information Disclosure Statement***

The information disclosure statements (IDSs) submitted on 3/26/04, 5/10/05 and 10/12/05 have been considered by the examiner.

### ***Election/Restrictions***

Applicant's election of Group I, claims 1-5, in the reply filed on 4/17/07 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Claims 6 and 7 are withdrawn.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2 and 3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 recites improper Group language and the claim is confusing and unclear. Examiner suggests "each of the pair of terminals protrudes from a different battery side".

### ***Claim Rejections - 35 USC § 102***

Art Unit: 1745

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 102(b)/103(a) as being anticipated by, and alternatively unpatentable over, Hirota, JP 2002-260615.

Hirota teaches a battery cell 4, a connector 6 and a circuit board 5. The circuit board 5 is electrically connected to respective terminals of the battery cell 4. The battery cell 4, the connector 6 and the circuit board 5 are integrally molded by a resin mold part 3 (abstract). As shown in at least Figure 3, the circuit board is on a first side of the battery cell, the positive electrode terminal is on a second side of the battery cell and the negative electrode terminal is on a third side of the battery cell. A negative electrode connection member 7 connects the negative electrode terminal to the circuit board and the positive electrode connection member 8 connects the positive electrode terminal to the circuit board. The connector 6 is provided on the circuit board 5. An insulator sheet 9 insulates the negative electrode connection member from the battery cell. The figures show a rectangular battery cell. The connector 6 has a housing

arranged on the circuit board and external connecting terminals electrically connected to the circuit board for connecting the battery cell and portable telephone (0013).

The limitation "a molded resin portion continuously formed via the resin path" is considered inherent in the teachings of Hirota. Hirota discloses the resin flowing in from a resin injection channel 14 spreads to both sides of the connector leaving the connector surface exposed. Thus the resin must flow, via a resin path, by the connector. See Figure 5. Note the top of the housing may also be considered a side of the housing.
